Global Simulated Emergency Test – Sunday 23rd November 2014

IARU Region 1 invites the HQ-Stations of all IARU member societies and stations of Emergency Communications Groups to participate in a Global Simulated Emergency Test on

Sunday November 23th, 2014 11.00 – 15.00 Local Time

The operation will take place on and near the emergency Centre-of-Activity (CoA) frequencies on 80, 40, 20, 17 and 15 metres (+-QRM).

This is a short notice event to test how well emergency communications groups can set up networks from home or temporary locations. Messages will be passed in both directions so please keep notes of who you can work as you may be asked to relay outgoing messages to their destination.

The timing of the event is different to allow stations the best chance of sending and receiving their messages and should still reduce any inter-region interference that may occur.

The objectives of the test are;

1. increase the common interest in emergency communications.
2. test how usable the CoA frequencies are across ITU regions.
3. create practices for international emergency communication and
4. practice the relaying of messages using all modes.

So, please remember that this is not a contest, it is an emergency communications exercise to develop the skills we will need to provide an international emergency network.

NAŠE UGOTOVITVE IN DELO:

- Sodelovala dva člana RK
- Kot v letu 2013 premajhna zainteresiranost S5 postaj za sodelovanje v vaji
- Udeležba iz SLO: S59ACP , S56IPS RMS Trimode gateway , S53DGM (nismo ga slišali...)
- G0DUB aktiven in odgovarja v digital modu in foniji
- Vzpostavljena zveza z HQ postajo G0DUB, vpis v dnevnik št.:33
- Od upravne postaje G0DUB sprejeli v winmor načinu potrditev zveze, sprejema sporočila.
- RMS Expres / WINMOR WL2K deluje, tako da je bilo sporočilo upravni postaji regije 1 (G0DUB) poslano z winmor načinom - preko interneta in brezžično na KV območju
- Delali v SSB in v Winmor / digital načinu...
- Škoda, ker ni delovala REGIONAL HQ – sporočilo bi sprejeli oni in ga posredovali naslovniku...
- Prevesti navodila in predpisane obrazce za vajo
- Na določenih frekvenčnih pasovih, v času vaje, ni možno vzpostavljati zvez zaradi pogojev na bandu

- Bolj precizno definirati način posredovanja sporočil, če predstavljaš le vmesno postajo, kdaj, komu...
- V času vaje je S59ACP sprejel in oddal 3 sporočil, 33 zvez
- Delovali smo v načinu fonije ter digital
- Delovni pogoji: FT-2000, MicroKeyer interface, PC, ustrezne antene

Zahvaljujoč Denisu S56DE in Norveškemu web SDR sprejemniku: <http://websdr.ewi.utwente.nl:8901/#test> prilagam še zvočne posnetke kako nas je bilo slišati...
